

Steps to run API and Frontend

Terminal 1 :

Build Containers

1. docker compose build --- builds containers
2. docker compose up -d --- builds and starts running

Run database

3. docker exec -it 8537516c72b8 psql -U appuser -d ais
4. \dt - to see the tables

Terminal 2 :

Run the api :

1. cd api
2. uvicorn app.main:app --reload
3. Open the link on the terminal to view Apis
4. Add /vessels , /positions , /vessels/latest , /collision-alerts to main URL to see all the endpoints

Terminal 3:

To see it on frontend

1. cd frontend
2. streamlit run streamlit_app.py
